Hiring Manager, Elwood Technologies, London

Re: Graduate Software Engineer – Backend (Market Connectivity)

Dear Hiring Manager,

As a 2026 STEM graduate in Computer Science and Engineering (NFSU Delhi) with 18 months of project-based backend engineering experience, I am applying for the Graduate Software Engineer – Backend role on your Backend and Market Connectivity teams.

What draws me to Elwood is your FCA-regulated, single-API infrastructure for institutional digital asset trading, execution, and risk management. I build the same kind of systems at smaller scale: a custom blockchain in Rust (Actix-web, SHA-256, Proof-of-Work) modelling immutable execution logging and custody workflows, exposed through a documented REST API with automated testing; a stateless authentication microservice handling 10K requests per second with JWT plus TOTP MFA, RBAC, and 99.99% uptime on Kubernetes; and a FastAPI plus Redis backend serving 5K queries per second at under 12ms latency.

I work across the full software development lifecycle – design, development, integration, automated testing, and maintenance – in fast-moving release cycles, using Rust, Go, Python, Java, C++, C#, and Node.js with microservices, event-driven design (Kafka), PostgreSQL, Redis, Docker, and GitHub Actions CI/CD that cut deployment from 2 hours to 7 minutes. I have strong foundations in data structures, algorithms, system design, and object-oriented and functional programming, and I collaborate with product-minded stakeholders and algo, infrastructure, and support peers to meet deadlines with continuous improvement in mind.

I would welcome the rotations across Backend and Market Connectivity to learn portfolio, execution, and order management systems from your quants, product, and engineering teams, and to contribute to institutional access to digital assets. I am open to relocating to London and am available immediately.

Thank you for your consideration. I would welcome the opportunity to discuss how my backend and market-connectivity mindset can help Elwood.

Yours sincerely,

Madhav Jadav
