Hiring Manager, Moonshot, Remote

Re: (Solidity / Rust) – Remote

Dear Hiring Manager,

My name is Madhav Jadav, and I am a recent graduate from the National Forensic Sciences University Delhi with a B.Tech-M.Tech Integrated CSE with a specialization in Cyber Security. I bring a diverse skill set that includes proficiency in programming languages such as Rust, Go, Python, Java, C++, C#, and Node.js, along with expertise in backend engineering, including REST APIs, microservices, and gRPC. My hands-on experience extends to knowledge of SQL and NoSQL databases like PostgreSQL, MongoDB, and Redis, along with containerization and orchestration tools like Docker and Kubernetes. I have a proven track record of delivering high-performance systems with a focus on security and efficiency, as evidenced by my work on the RhinoChain custom blockchain project and the authentication microservice for digital asset custody logging.

In my most relevant projects, I successfully designed and implemented a Solidity-based custom blockchain in Rust using the Actix-web framework, ensuring a robust and secure environment for digital asset custody logging. My work on the authentication microservice involved the integration of JWT, MFA, and RBAC mechanisms on Kubernetes, achieving a 99.99% uptime with a 10K RPS JWT+MFA+RBAC system. Furthermore, I developed a FastAPI+Redis classifier API that maintained a latency of under 12ms at 5K QPS, demonstrating my ability to handle high-load systems efficiently. My experience with Kafka streaming pipelines and GitHub Actions CI/CD pipelines showcases my ability to manage and deploy complex, high-performance applications. These projects align closely with the responsibilities of the Solidity/Rust Remote Trading Engineer role at Moonshot, where I would own core trading programs, including order execution, auto-sell, and fee routing, on Solidity and Rust.

Moonshot's commitment to providing a seamless and secure trading experience resonates with my professional ethos. I am excited about the opportunity to contribute to a small, agile team where I can make an impact from the start. My project experience, combined with my willingness to relocate to Miami, makes me a strong candidate for this role. I am confident that my skills and passion for blockchain technology will contribute to the continued success and expansion of Moonshot.

Thank you for your consideration. I would welcome the opportunity to discuss how my backend engineering experience can contribute to Moonshot.

Yours sincerely,

Madhav Jadav
