Hiring Manager, kraken, Remote

Re: Senior Full Stack Engineer, Growth & Experimentation – Krak

Dear Hiring Manager,

As a seasoned professional with a background in backend engineering and a passion for blockchain technology, I am excited to apply for the Senior Full Stack Engineer position at Kraken's Growth & Experimentation team. My education and experience have equipped me with a solid foundation in web3 development, and I am eager to contribute to an organization that is at the forefront of building the future of open finance. I bring a wealth of relevant skills and experience, particularly in Rust and blockchain development, which aligns well with the innovative and dynamic environment at Kraken.

In my previous role, I successfully led the development of RhinoChain, a custom blockchain solution for digital asset custody logging, which utilized SHA-256 and Proof-of-Work for security. Additionally, I developed a FastAPI+Redis classifier API with a latency of less than 12ms at 5K QPS and a Kafka streaming pipeline. I am proficient in several programming languages, including Rust, Go, Python, Java, C++, C#, Node.js, and SQL, and have hands-on experience with Docker, Kubernetes, Helm, and GitHub Actions CI/CD. These skills, along with my expertise in cryptocurrency and security, make me a strong candidate for this role.

Kraken's mission to build a modern, globally accessible financial infrastructure resonates with my personal values of open, transparent, and inclusive finance. I am excited about the opportunity to contribute to Kraken's ongoing innovation and growth, and I am open to relocation to support this mission. I am confident that my technical skills and passion for blockchain technology will make a significant impact in the Growth & Experimentation team.

Thank you for your consideration. I would welcome the opportunity to discuss how my backend engineering experience can contribute to kraken.

Yours sincerely,

Madhav Jadav
