Hiring Manager, stellar development foundation, Remote

Re: Staff Software Engineer, C++/Rust

Dear Hiring Manager,

As a 2026 B.Tech-M.Tech Integrated CSE graduate with a strong background in cybersecurity from National Forensic Sciences University Delhi, I am excited to apply for the Software Engineer position at the Stellar Development Foundation, specializing in C++/Rust at a remote location. My academic journey has equipped me with a solid foundation in backend engineering, and I have honed my skills in implementing cutting-edge blockchain technology, with a particular interest in creating equitable access to the global financial system. My commitment to continuous learning and practical application of my knowledge led me to actively participate in hackathons and CTFs, securing over 10 wins, including First Prize in SRM Verge 2025 and Second Prize in RedFox CyberStorm CTF 2025.

During my 18-month project-based backend engineering experience, I have developed a deep understanding of various programming languages and technologies, including Rust, Go, Python, Java, C++, C#, Node.js, SQL, and cloud services like AWS EC2. I have successfully designed and implemented a custom blockchain solution using RhinoChain in Rust, ensuring high uptime and security through authentication microservices using JWT, MFA, and RBAC on Kubernetes. I have also created a classifier API using FastAPI with Redis, achieving <12ms latency at 5K QPS, and built a Kafka streaming pipeline for efficient data processing. My expertise aligns with the Stellar Development Foundation's mission of expanding and scaling the Stellar ecosystem.

The Stellar Development Foundation stands out for its mission-driven approach to blockchain technology and its commitment to creating a more inclusive financial system. My hands-on experience with blockchain development, coupled with my expertise in modern backend technologies and cloud services, makes me a strong candidate for this role. I am eager to contribute to the Stellar team and help maintain and improve the Stellar Core, the primary distributed system used for maintaining Stellar's ledger and obtaining global consensus. I am currently open to relocation and ready to join a forward-thinking team that prioritizes innovation and growth.

Thank you for your consideration. I would welcome the opportunity to discuss how my backend engineering experience can contribute to stellar development foundation.

Yours sincerely,

Madhav Jadav
