Hiring Manager, CertiK

Re: Junior Blockchain Security Engineer (Solidity / Rust / Golang)

Dear Hiring Manager,

As a 2026 Cyber Security graduate (NFSU Delhi) with 18 months of Rust backend and security research experience, I am applying for the Junior Blockchain Security Engineer role.

I build Rust security systems: RhinoChain, a custom blockchain (Actix-web, SHA-256, Proof-of-Work) with REST API and automated testing for cryptographic integrity; a hardened auth microservice (10K RPS, JWT plus MFA, RBAC, 99.99% uptime, zero unauthorized access in pen tests); plus CTF results including 2nd place at CyberStorm and HackTheBox Cyber Apocalypse 2023 and 2024 in web exploitation, cryptography, and reverse engineering. I work in secure SDLC with OWASP Top 10, Burp Suite, ZAP, and CI/CD.

I am familiar with Solidity audit workflows from CTFs and protocol-security research and am building a Solidity audit sample to complement my Rust and Go tooling. I would welcome the chance to contribute to CertiK's smart contract audit and protocol security mission.

Available immediately for remote worldwide (contractor if sponsorship is unavailable). Thank you for your consideration.

Yours sincerely,

Madhav Jadav
